Analysis of Results

Analysis of Results

1.   Population

Total population of Macao was 650,834 in August 2016, an increase of 98,331 or 17.8% as compared with 2011.

Population size increased significantly as against 414,128 in 1996. During the past 20 years, the most rapid population growth was observed between 2011 and 2016, up by 17.8% in five years (an average annual growth rate of 3.3%). This was mainly due to a substantial increase in non-resident workers living in Macao and a rebound in the birth rate over the past five years.

1. Total Population of Macao

	1996	2001	2006	2011	2016
Total population	414,128	435,235	502,113	552,503	650,834
Growth in five years (%)	16.4	5.1	15.4	10.0	17.8
Average annual growth (%)	3.1	1.0	2.9	1.9	3.3

Total population comprises local population, non-resident workers and foreign students living in Macao. Local population totalled 537,018 in August 2016, up by 10.7% from 2011. Non-resident workers and foreign students living in Macao totalled 104,464 and 9,352, up by 67.7% and 89.2% respectively, together accounting for 17.5% of the total population.

2. Population Structure

	2011		2016		Change	
	No.	Structure (%)	No.	Structure (%)	No. (%)	Structure (p.p.)
Total population	552,503	100.0	650,834	100.0	17.8	-
Local population	485,255	87.8	537,018	82.5	10.7	-5.3
Non-resident workers living in Macao	62,304	11.3	104,464	16.1	67.7	4.8
Foreign students living in Macao	4,944	0.9	9,352	1.4	89.2	0.5

In addition, marine population went up by 285 over 2011 to 1,020, comprising mainly non-resident workers working on vessels.

Chart 1 – Population change and average annual growth
1.1 Age and Gender Structure

Number of newborns rebounded substantially over the past five years, causing the youth population (aged 0-14) to rise by 18.2% from 65,870 in 2011 to 77,847. The rate of growth was slightly higher than that of the total population (+17.8%), bringing the proportion of the youth population in the total population up by 0.1 percentage point to 12.0%. Meanwhile, the adult population (aged 15-64) rose by 15.0% within five years to 513,604 due to an increase in non-resident workers living in Macao, but the growth rate was still lower than that of the total population, bringing its proportion in the total population down by 1.9 percentage points to 78.9%.

On the other hand, the elderly population (aged 65 and above) surged by 48.6% over the past five years to 59,383 as the incoming immigrants in the 1970's and 1980's gradually moved into the elderly population, with its proportion in the total population going up by 1.9 percentage points to 9.1%. The elderly registered rapid growth, of which those aged 65-74 (38,476) made up 5.9% of the total population, up by 2.0 percentage points compared to five years earlier, and those aged 55-64 (87,583) constituted 13.5%. The pace of population ageing is expected to accelerate in the next decade.

Within the local population, the proportions of the youth and elderly populations were 14.5% and 11.0%, higher than the corresponding proportions in the total population by 2.5 and 1.9 percentage points respectively.

Chart 2 – Age structure of the population
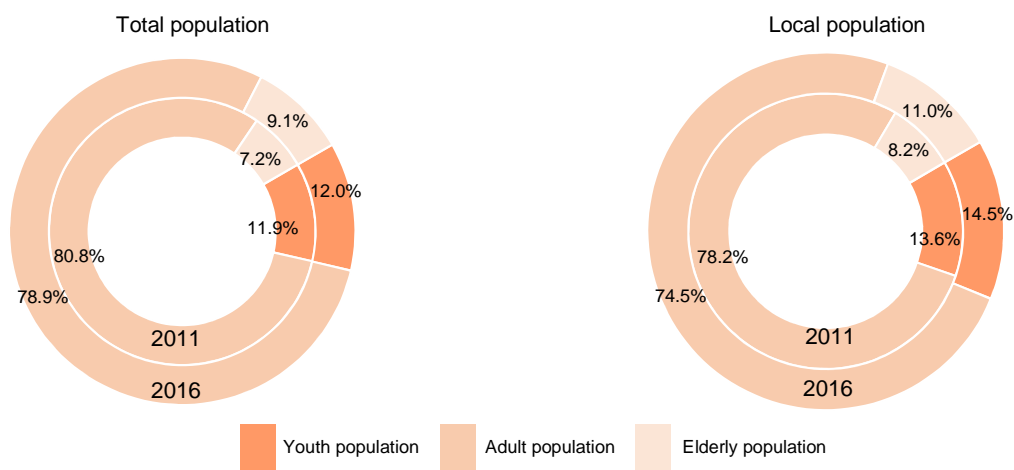

As the growth rates of the youth and elderly populations were higher than the rate of the total population, the dependency ratio of the total population increased from 23.7% in 2011 to 26.7% in 2016, and the ageing ratio also went up from 60.7% to 76.3%. Meanwhile, the various dependency ratios of the local population also marked an increase.

3. Dependency ratios
%

	2011		2016			
	Total population	Local population	Total population	Difference (p.p.)	Local population	Difference (p.p.)
Overall dependency ratio	23.7	27.8	26.7	3.0	34.2	6.4
Youth dependency ratio	14.7	17.3	15.2	0.5	19.5	2.2
Elderly dependency ratio	8.9	10.5	11.6	2.7	14.7	4.2
Ageing ratio	60.7	60.3	76.3	15.6	75.8	15.5

Due to a rebound in the birth rate and an increase in the elderly population, the base (younger generations) and the top (older generations) of the population pyramid (Chart 3) were broader as compared with 2011. Analysed by age group, population aged 25-34 represented the largest group at 135,016, up substantially by 36.9%, predominated by non-resident workers, foreign students and local baby boomers born in the 1980's. Hence, the proportion of this age group in the total population went up by 2.9 percentage points from five years ago to 20.7%.

Chart 3 – Population pyramid (2011 and 2016)
Chart 4 – Population pyramid of total population and local population
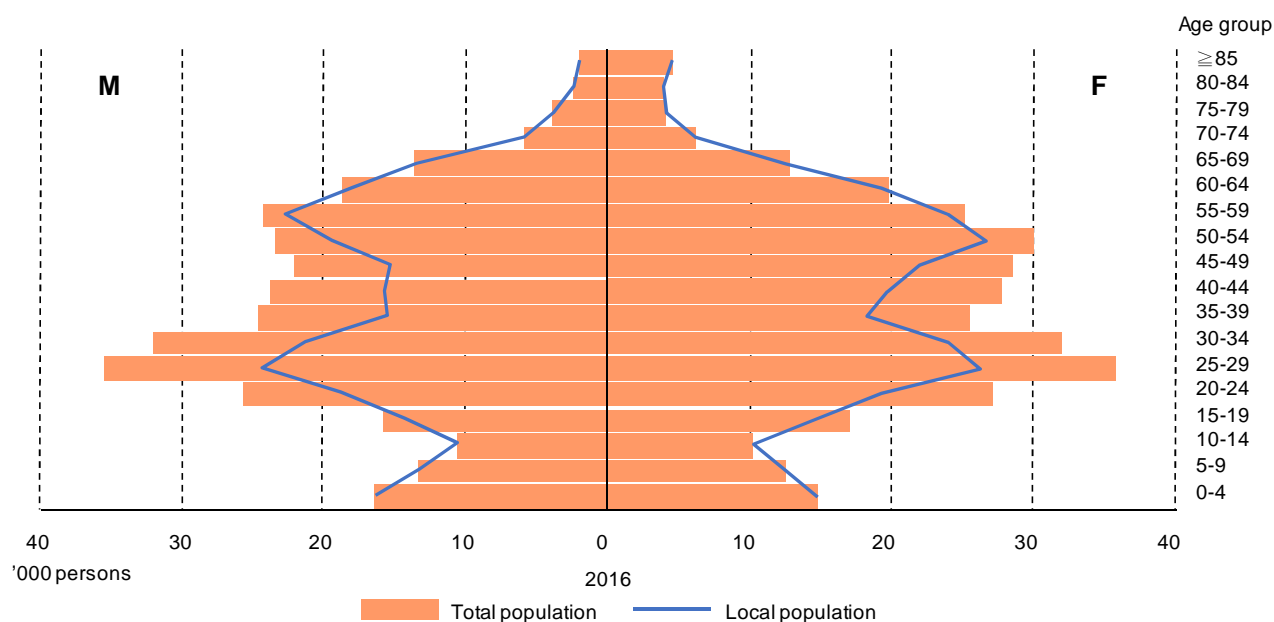

Chart 4 showed that the local population in 2016 were concentrated in the age groups of 25-34 and 50-59, altogether accounting for 35.2% of the local population; the middle part of the pyramid for the population aged 35-44 narrowed significantly, comprising only 12.9% of the total, attributable to the low number of births in the 1970's.

With the continuous ageing of the local population, the median age of the local population increased from 38.1 in 2011 to 39.0. Non-resident workers and foreign students living in Macao were mostly aged 20-49, which helped ease the population ageing of Macao, hence, the median age of the total population rose slightly from 37.0 in 2011 to 37.5.

Regarding the gender structure, males (314,018) and females (336,816) accounted for 48.2% and 51.8% respectively of the total population. Despite an excess of females over males, the growth of the male population (+18.4%) was slightly higher than that of the female population (+17.2%), causing the gender ratio to rise from 92.3 males per 100 females in 2011 to 93.2 males in 2016. Analysed by age structure, the gender ratio of the youth population was 107.8 males per 100 females as male babies outnumbered female babies. Females predominated in the adult and elderly populations, with 91.5 males and 90.2 males per 100 females respectively, as most of the incoming immigrants were females and the lifespan of women was comparatively longer.

As regards the local population, the gender ratio dropped from 92.7 in 2011 to 90.2, indicating an apparent surplus of women over men. Analysed by age group, only the gender ratio of the local population aged 15-24 (98.0) was higher than the corresponding ratio of the total population (93.8), as the foreign students living in Macao in this age group were mostly females. For the population aged 25-54, the gender ratio of each age group of the local population was lower than that of the total population, as the non-resident workers living in Macao within these age groups were mostly males.

Chart 5 – Gender ratio by age group

No. of males
per 100 females

	Total population	Local population
0-14	107.8	107.8
15-24	93.8	98.0
25-34	99.4	91.2
35-44	91.0	83.4
45-54	77.9	72.0
55-64	95.9	94.3
≧ 65	90.2	90.2
1.2 Place of Birth

Incoming migrants have always been an essential component of the population of Macao. Due to an increase in number of non-resident workers and foreign students living in Macao, the proportion of population born outside Macao rose further from 59.1% in 2011 to 59.3% in 2016. Analysed by place of birth, the majority (284,072) were born in Mainland China, with its proportion in the total population decreasing by 2.5 percentage points over 2011 to 43.6%, followed by those born in Macao (265,090) which accounted for 40.7%, down slightly by 0.2 percentage points.

On the other hand, population born in the Philippines rose by 98.3% from five years ago to 28,848. Those born in Vietnam and Nepal also surged by 126.4% and 301.6% to 16,297 and 3,815 respectively. The three together accounted for 7.5% of the total population, up by 3.4 percentage points over 2011.

Regarding the local population, the majority were born in Macao (49.4% of total), followed by Mainland China (43.1%). Meanwhile, 86.9% of the youth population were born in Macao and 64.3% of those aged 40 and above were born in Mainland China.

Analysed by the length of residence in Macao[1], non-Macao born land-based population totalled 384,855, and 29.6% of them had resided in Macao for less than 5 years, consisting mainly of non-resident workers coming to Macao for work; besides, 22.6% had lived in Macao for 35 years or more, with the majority being Chinese immigrants and returned overseas Chinese from Southeast Asia.

The majority of population born in the Philippines and Vietnam had resided in Macao for less than five years, accounting for 60.5% and 64.2% respectively of the total. Moreover, 63.6% of those born in Myanmar had resided in Macao for 35 years or more. Among those born in Mainland China, 26.3% had resided in Macao for 35 years or more, and 23.2% for less than five years.

---

[1] "Length of residence in Macao" is only applicable to the land-based population as the marine population are often away from Macao to work at sea.

5

4. Non-Macao born land-based population

	Total	Length of Residence in Macao (%)				
		<5 years	5-14 years	15-24 years	25-34 years	≥35 years
Total	384,855	29.6	22.5	9.6	15.7	22.6
Mainland China	283,271	23.2	20.5	10.6	19.3	26.3
Philippines	28,848	60.5	29.8	6.9	2.6	0.1

Vietnam	16,296	64.2	33.5	0.6	0.5	1.1
Myanmar	6,958	20.8	3.9	2.9	8.8	63.6
Indonesia	5,918	37.3	31.2	2.5	8.0	21.0
Other Asian countries or	14,373	52.7	28.6	5.7	3.4	9.6
territories Portugal	2,011	34.4	25.2	19.4	13.9	7.1
Other countries or territories	5,741	40.1	32.9	13.5	5.1	8.4

1.3 Nationality and Ethnicity

Population of Chinese nationality totalled 575,585, accounting for 88.4% of the total population, down by 3.8 percentage points from 2011. Meanwhile, those of Portuguese nationality totalled 9,024, with its proportion in the total population rising by 0.5 percentage points from five years ago to 1.4%. Due to an increasing number of people coming to work, study or reside in Macao, the proportion of population of non-Chinese nationality went up from 7.7% in 2011 to 11.6% in 2016, and the majority were Filipinos and Vietnamese, comprising 4.6% and 2.4% of the total population.

Population of Chinese ethnicity totalled 577,107, taking up 88.7% of the total population, down by 3.7 percentage points from 2011. Those of Portuguese ethnicity totalled 11,715, with its proportion in the total population increasing by 0.3 percentage points to 1.8%.

1.4 Marital Status

Among the population aged 16 and above (568,142), 29.9% were unmarried and 3.3% were separated or divorced, up by 0.7 and 0.5 percentage points as compared with the standardised rates[2] in 2011. Meanwhile, the proportions of those who were married (63.2%) and widowed (3.7%) dropped by 0.8 and 0.4 percentage points respectively from five years ago.

Over the past five years, the proportion of unmarried females increased by 1.4 percentage points to 29.4%, while that of unmarried males dropped slightly to 30.4%, narrowing the difference between the two proportions to 1.0 percentage point. On the other hand, as males were more likely to remarry, the proportion of separated or divorced males (2.0%) was lower than that of females (4.4%). Moreover, the proportion of widow (6.1%) was far higher than that of widower (1.0%) as females had longer lifespan.

---

[2] To eliminate the effect caused by the difference in age-gender structure, data on marital status five years ago have been re-compiled according to the standardised age-gender structure of the 2016 Population By-Census, which enables direct comparison of the standardised data.

5. Marital Status   %

	2011				2016			
	Total population		Local population		Total population		Local population	
	Male	Female	Male	Female	Male	Female	Male	Female
Unmarried	30.5	28.0	29.2	25.6	30.4	29.4	29.5	26.9
Married	66.6	61.7	67.7	62.9	66.6	60.0	67.1	61.5
Separated/divorced	1.8	3.6	1.7	3.6	2.0	4.4	2.2	4.5
Widowed	1.1	6.7	1.4	7.9	1.0	6.1	1.2	7.2

Average age at first marriage rose further from 29.0 in 2011 to 29.5 in 2016. Average age at first marriage for both males and females increased, indicating the tendency of late marriage for both genders.

6. Average age at first marriage   years

	2011		2016		Difference	
	Total population	Local population	Total population	Local population	Total population	Local population
Total	29.0	29.1	29.5	29.5	0.5	0.4
Male	29.9	30.1	30.2	30.5	0.3	0.4
Female	28.3	28.1	28.9	28.7	0.6	0.6

As regards the local population, the proportion of unmarried females (26.9%) was also lower than that of males (29.5%). Analysed by age group, higher proportion of unmarried females than males was observed in the population aged 35 and above, while the same happened in the population aged 40 and above in 2011.

Chart 6 – Marital status of the local population
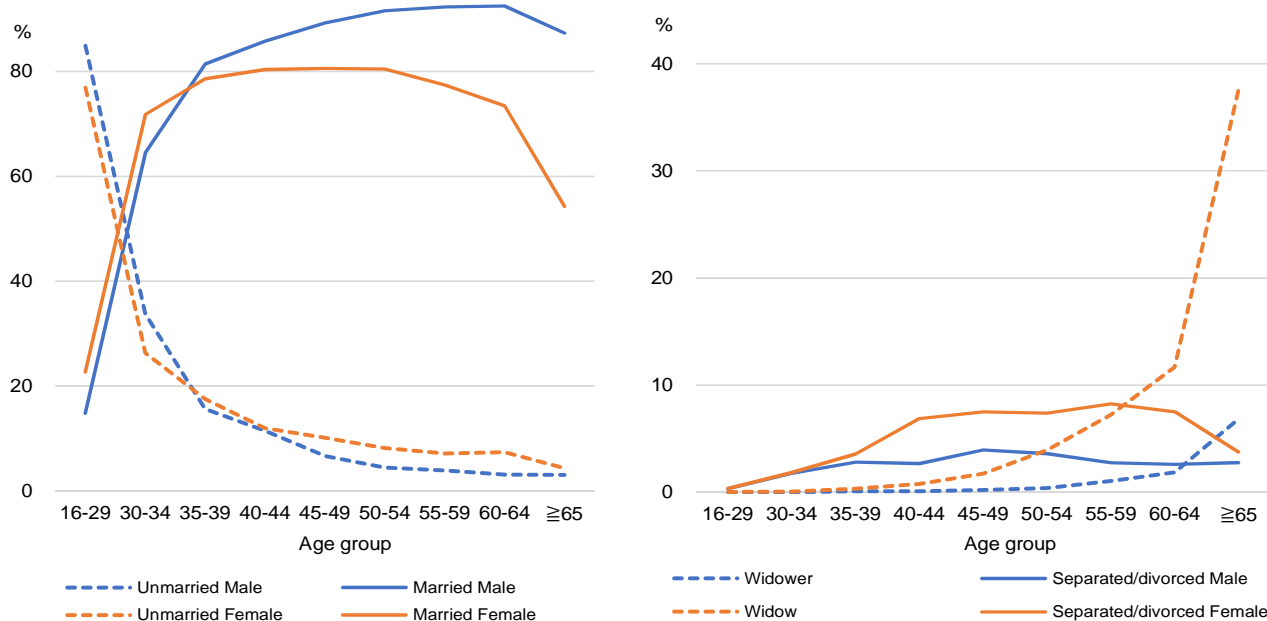

1.5 Educational level

<u>Educational Attainment</u>

Education level of the Macao's population continued to rise. Among the population aged 3 and above (632,857), 26.2% completed senior secondary education and 23.1% completed tertiary education, up by 0.1 and 6.4 percentage points respectively as compared with 2011. Moreover, those completed junior secondary education or below constituted 50.7%, down notably by 6.5 percentage points from five years ago.

Chart 7 - Distribution of population by educational attainment
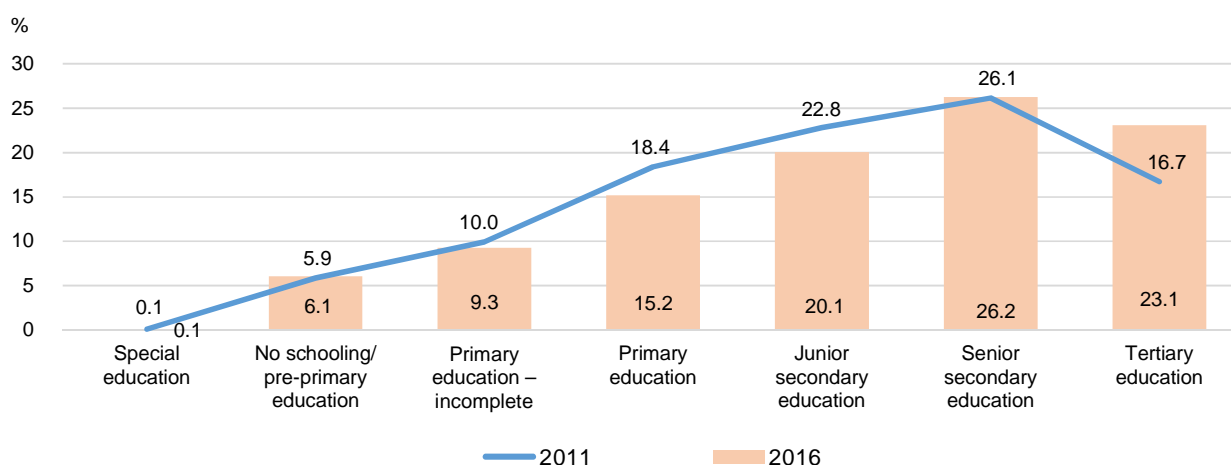

Population with academic degree totalled 133,395, of which 86.3% had a Bachelor's degree, and 12.2% had a Master's degree. Analysed by academic discipline, most of the Bachelor and Master's degree holders studied in Business and Administration, accounting for 29.0% and 38.2% respectively; meanwhile, 16.2% of the doctoral degree holders studied in Humanities & Arts and 16.1% in Science.

With the continuous development of the local tertiary education, 39.5% of the population with academic degree attained their degree in Macao, up by 4.2 percentage points from 2011. In addition, 24.8% of them attained their degree in Mainland China, and 8.9% in Taiwan region. Those who earned their degree in Europe and Americas took up 5.7% and 4.8% respectively of the total.

As regards the local population, 23.0% completed senior secondary education, down by 0.9 percentage points from five years ago; meanwhile, 22.6% completed tertiary education, up by 6.8 percentage points. Analysed by gender, the proportion of males who completed senior secondary education (23.9%) was higher than that of females (22.3%), whereas the proportion of females who completed tertiary education (23.1%) exceeded that of males (21.9%). Women had benefited more from the universalisation of tertiary education. The proportion of females aged 16-39 who completed tertiary education (46.3%) was higher than the corresponding proportion of males (39.0%). However, the opposite was observed among those aged 40 and above; the proportion of females who completed tertiary education (11.9%) was lower than that of males (14.9%).

Chart 8 - Distribution of local population with tertiary education
School Attendance

Among the land-based population aged 3-19 (92,555), 96.3% would attend regular education in the coming school year (2016/2017), the same proportion as in 2011. School attendance rate of those aged 20-24 rose by 0.8 percentage points from five years ago to 41.7%. Meanwhile, the rate of those aged 25-29 went down by 6.8 percentage points to 6.0%, owing to the higher proportion of population with academic degree in this age group. In 2016, 51.0% of this age group had a Bachelor's degree or higher, far higher than the proportion of 36.4% in 2011.

Language Skills

Population who used Cantonese as their usual language totalled 506,625, accounting for 80.1% of the population aged 3 and above, down by 3.3 percentage points from 2011. With an increase in the incoming immigrants, the corresponding proportions of population who used Mandarin (5.5%) and Tagalog (3.0%) as their usual language rose by 0.4 and 1.2 percentage points respectively, while the corresponding proportion for English (2.8%) went up by 0.5 percentage points.

With respect to the overall language skills, population who could speak fluent Mandarin or English constituting 50.4% and 27.5% respectively of the total, up by 9.0 and 6.4 percentage points from five years ago. In addition, those who could speak fluent Portuguese accounted for 2.3%, down by 0.2 percentage points.

Literacy

Population aged 15 and above totalled 572,987, with its literacy rate increasing by 0.9 percentage points from 2011 to 96.5%. Analysed by gender, male literacy rate (98.2%) was higher than that of females (95.0%). The growth in female literacy rate exceeded that of males compared to five years ago, with the gap narrowing from 4.1 percentage points to 3.2 percentage points.

Analysed by age group, the literacy rate of the population aged 15-39 was the highest (99.7%), whereas that of the population aged 65 and above was the lowest (81.2%). On the other hand, the literacy rate of the elderly women (72.1%) was far lower than that of elderly men (91.3%), as women were given less opportunity to receive education in the past.

9

1.6 Migration Flows

Increase in completion of public housing units and a substantial growth in non-resident workers coming to work in Macao in recent years contributed to a rise in migration flows. Among the land-based population aged 5 and above (618,815), 42.8% changed residence in the last five years, up by 4.4 percentage points from 2011.

Population that changed residence within Macao (internal migration) totalled 136,563, up by 38.1% from five years ago. Those who changed residence within the Macao Peninsula totalled 89,558, comprising 65.6% of the total internal migrants, down by 11.2 percentage points from five years ago. A large number of people moved into the Coloane Island as there were more newly completed public housing units. Population that moved from the Macao Peninsula and Taipa to the Coloane Island totalled 17,102, with its proportion in the internal migrants rising substantially by 12.0 percentage points to 12.6%.

7. Distribution of internal migrants %

Place of residence 5 years ago	Residence in 2011				Residence in 2016			
	Total	Macao Peninsula	Taipa Island	Coloane Island	Total	Macao Peninsula	Taipa Island	Coloane Island
Total	100.0	81.0	18.3	0.7	100.0	68.9	18.4	12.7
Other unit in Macao Peninsula	87.7	76.8	10.4	0.5	86.9	65.6	10.4	11.0
Other unit in Taipa Island	11.9	4.0	7.7	0.1	12.7	3.2	7.9	1.6
Other unit in Coloane Island	0.4	0.1	0.2	0.1	0.4	0.2	0.1	0.1

Population who lived outside Macao five years ago and moved to Macao within the five years totalled 128,278, of which non-resident workers and foreign students living in Macao accounted for 65.3%.

Analysed by place of residence five years ago, the majority were incoming immigrants from Mainland China, taking up 56.7% of the total, followed by the Philippines, constituting 12.7%.

8. Incoming immigrants from places outside Macao

Place of residence 5 years ago	2011		2016		Difference (p.p.)
	Total	Structure (%)	Total	Structure (%)	
Total	104,272	100.0	128,278	100.0	-
Mainland China	61,610	59.1	72,683	56.7	-2.4
Hong Kong SAR	9,470	9.1	9,209	7.2	-1.9
Philippines	8,068	7.7	16,269	12.7	5.0
Taiwan region	4,732	4.5	4,380	3.4	-1.1
Other Asian countries or territories	12,780	12.3	19,877	15.5	3.2
Other countries or territories	7,612	7.3	5,860	4.6	-2.7

1.7 Economic Activity Status

<u>Employment Status</u>

Labour force increased by 17.1% from 2011 to 405,913 in 2016, of which non-resident workers living in Macao accounted for 25.7%, up by 8.2 percentage points. Total labour force participation rate was 71.4%, slightly lower than the rate five years ago (72.2%) due to population ageing. Analysed by gender, the male and female labour force participation rates were 77.0% and 66.4%, down by 0.7 and 0.8 percentage points respectively from 2011.

Local labour force totalled 301,255, up merely by 5.6% compared with five years ago. Labour force participation rate of the local population dropped by 2.8 percentage points from 69.1% in 2011 to 66.3% in 2016.

Number of employed population (total employment) was 391,464, of which 82,983 were working in the Gaming & Junket Activities (Gaming) (21.2%), followed by the Construction sector (10.1%) and Retail Trade (9.0%). Employment in the Construction sector increased by 43.1% compared with 2011 due to the launch of large-scale construction projects, and its proportion in total employment rose by 1.9 percentage points. Moreover, there was a rising demand for domestic helpers as dual-career family became more common. Employed population working in Domestic Work surged by 54.6% from five years ago, with its proportion going up by 1.7 percentage points to 6.7%. Analysed by occupation, the majority were Clerks (including croupiers, floorpersons, cage cashiers, etc.), with 99,450, accounting for 25.4% of the employed population, followed by Service & Sales Workers (21.2%) and Unskilled Workers (16.6%).

Chart 9 - Distribution of total employment by major industry
Chart 10 - Distribution of total employment by occupation
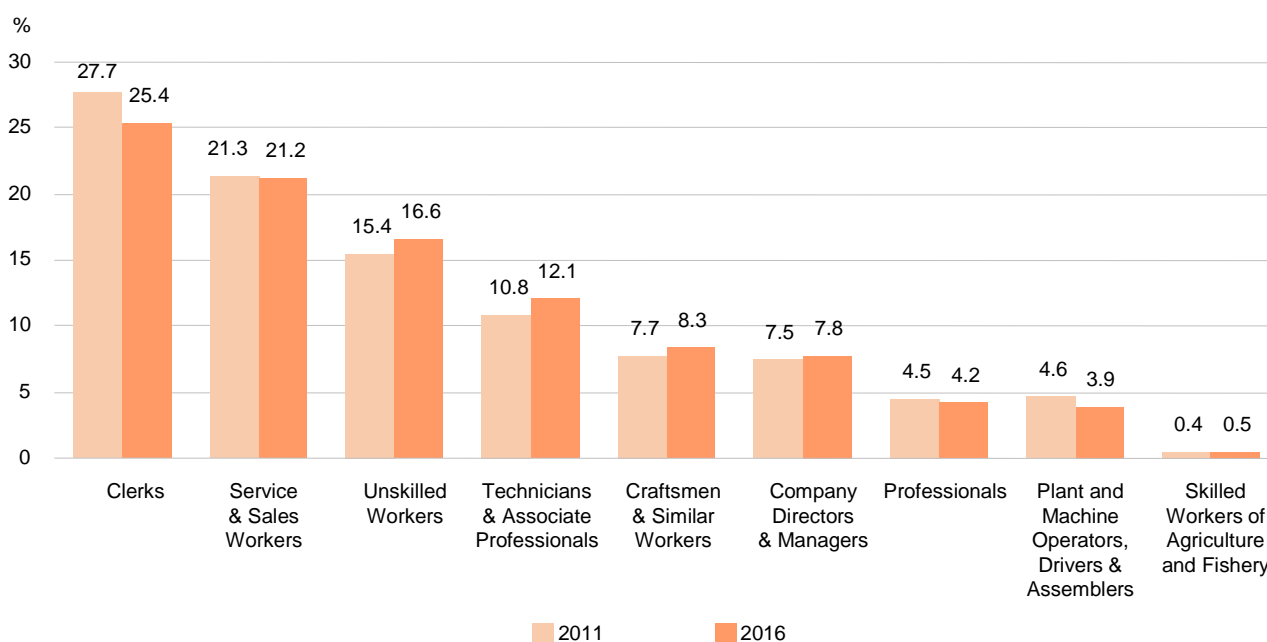

Median employment earnings of the employed population in July 2016 amounted to MOP15,000, an increase of MOP5,000 from the same month of 2011. Median employment earnings of the local employed population rose by MOP7,000 to MOP18,000.

Education level of the employed population rose continuously, of which 31.4% completed tertiary education, up notably by 8.1 percentage points from five years ago; 16.9% had primary education or below, down by 4.4 percentage points compared with five years ago.

Changing Jobs or Positions

In the past five years, full-time employed local population who had changed jobs or positions totalled 72,510, with equal shares of males and females. Most of them predominated in the age group 25-34, constituting 44.2%. As regards employment earnings, current median employment earnings of those who had changed jobs or positions was MOP18,000, up by 20.0% from MOP15,000 in their previous jobs or positions.

Analysed by occupation, over half (51.6%) of the full-time employed local population worked as Clerks and Service & Sales Workers on their current position, altogether totalling 37,397. Among those who were previously Clerks (25,757), 4,112 (16.0%) changed to Professionals, Technicians & Associate Professionals. Those who were previously Unskilled Workers totalled 4,982, and 2,001 (40.2%) of them changed to Clerks and Service & Sales Workers.

On the other hand, among those who had changed jobs, 17,804 were then working in the Gaming sector and 7,909 in Retail Trade, accounting for 24.4% and 29.7% respectively of the full-time employed local population in the respective industries.

Professional Certification

Within the population aged 16 and above (454,326), 10,818 (2.4%) had professional certification, of which 58.4% were males, and 33.3% were aged 25-34.

Analysed by category of profession, most people had certification related to "Business Administration and Finance", comprising 32.0% of the total, followed by "Construction, Installation & Maintenance" and "Information Technology", accounting for 13.3% and 10.5% respectively.

Local employed population with professional certification totalled 9,234. Among those working in Financial Intermediation and Real Estate & Business Activities, 14.4% and 10.0% had professional certification respectively. Analysed by occupation, the proportions of Professionals and Technicians & Associate Professionals accounted for higher proportions, representing 8.3% and 7.0% of the local employed population.

1.8 Geographic Distribution

Areia Preta & Iao Hon remained the most populated statistical district, with a population of 76,929, comprising 11.8% of the land-based population, which was followed by Baixa da Taipa (10.5%) and NATAP (9.9%).

The population growth in Taipa and Coloane Islands was much greater than that in the Macao Peninsula in the past five years as newly completed residential units concentrated mainly in Taipa and Coloane Islands. The top three statistical districts that registered rapid population growth were Coloane Island, Pac On & Taipa Grande and Universidade & Baía de Pac On. The population in Coloane Island surged by 530.9% from 4,262 in 2011 to 26,889 in 2016, owing to the households moving into the public housing units in Seac Pai Van. On the other hand, increased number of tertiary education students moving into their dormitories caused the population in Pac On & Taipa Grande and Universidade & Baía de Pac On to soar by 126.7% and 99.2% respectively from five years ago.

Regarding the Macao Peninsula, the population in Ilha Verde grew faster due to an increase in public housing units; meanwhile, population growths in other statistical districts were all lower than the overall population growth (17.8%).

Local population in Baixa de Macau, Conselheiro Ferreira de Almeida, Patane & São Paulo, Barca and Barra & Manduco altogether dropped by 2,718 compared with five years ago, whereas the local population in new development areas such as Coloane Island, Baixa da Taipa and NATAP increased by 36,980. In addition, number of non-resident workers living in Areia Preta & Iao Hon, Barra & Manduco, Barca and Patane & São Paulo increased rapidly by a total of 20,171, which partly compensated the local population who had moved out.

Chart 11 - Population change by statistical district (between 2011-2016)
Total land area of Macao measured 30.5 square kilometres in 2016, with an average annual increase of 0.4% over the past five years, lower than the average annual population growth of 3.3%. As a result, population density climbed further to 21,340 persons per square kilometre, an increase of 2,862 persons from 2011. Areia Preta & Iao Hon remained the most densely populated district, reaching 170,953 persons per square kilometre, followed by Doca do Lamau, with 146,857 persons per square kilometre.

Population ageing was relatively fast in Conselheiro Ferreira de Almeida, Coloane Island, Praia Grande & Penha and Guia, with the respective proportions of elderly population exceeding 12.0%, which was higher than that of the total population (9.1%). Mean age of the population in Conselheiro Ferreira de Almeida was the highest among the four districts, at 42.0, and its ageing index was the highest of all districts at 145.8%, as the youth population in this district was relatively low. Meanwhile, mean age of the population in Pac On & Taipa Grande and Universidade & Baía de Pac On was below 30, mainly attributable to a higher proportion of foreign students living in these districts.

1.9 Others

<u>Self-care Ability in Daily Life</u>

Local population aged 60 and above totalled 96,496, of which 95.3% indicated that they were able to take care of themselves in daily life, while 4.7% expressed the opposite.

Among those who were unable to take care of themselves in daily life (4,557), 1,023 were living in elderly homes. With respect to gender, females and males totalled 2,954 and 1,603 respectively, taking up 64.8% and 35.2% of the total.

Number of people who were unable to take care of themselves in daily life increased with age. Among the local population aged 80-84, 13.4% indicated that they were unable to take care of themselves; meanwhile, the corresponding rate of those aged 85 and above reached 31.1%. The proportion of females who were unable to take care of themselves in daily life was higher than that of males. Among the local female population aged 60 and above, 5.9% were unable to take care of themselves; meanwhile, the corresponding proportion for males was 3.5%.

9. Local population who were unable to take care of themselves in daily life

Non-resident Workers Living in Macao

Demand for human resources increased along with the rapid economic development of Macao in the past ten years. Holders of Non-resident Worker's Identification Card surged by 105.3% from five years ago to 182,178 in end-August 2016. With the rising cost of living in Macao, an increasing number of non-resident workers opted to live in Zhuhai and the neighbouring areas. Non-resident workers living in Macao accounted for 57.3% of the total non-resident workers, down by 12.9 percentage points from 2011.

Non-resident workers living in Macao totalled 104,464, up by 67.7% compared with 2011. Males and females accounted for 53.6% and 46.4% respectively of the total. The majority of non-resident workers were concentrated in the age groups of 25-44, comprising 67.3% of the total, and the median age stood at 36.2. Analysed by marital status, married and unmarried non-resident workers living in Macao took up 64.8% and 31.5% respectively. Moreover, the proportion of married males (68.8%) was higher than that of married females (60.1%).

Analysed by industry, most non-resident workers living in Macao engaged in Domestic Work, taking up 23.8% of the total, followed by Construction and Restaurant & Similar Activities, occupying 17.7% and 14.1% respectively. Most of the domestic workers were Filipino and Vietnamese, accounting for 50.7% and 32.0% respectively of the total. Meanwhile, those who worked in Construction and Restaurant & Similar Activities were mainly Chinese, taking up 97.6% and 70.8% of the non-resident workers who lived in Macao and engaged in the respective industries.

2. Household

2.1 Household size

Number of households totalled 188,723, up by 10.5% compared with 2011, including 159 households of marine population. Average household size was 3.07, a slight decrease of 0.01 from five years ago.

Analysed by household size, 3-person households predominated, occupying 24.5% of the total households, up by 1.3 percentage points from 2011. Meanwhile, the proportion of 4-person households decreased by 1.6 percentage points to 21.4%. The proportion of households with 6 persons or more rose from 5.4% in 2011 to 5.6% in 2016.

12. Household size

	2011		2016		Difference (p.p.)

Note: Excluding households living in collective living quarters (staff quarters, institutions or infirmaries, etc.).

2.2 Household Composition

Households are categorised into "one-person household", "nuclear household" and "no nuclear household" according to the relationship between household members. A family nucleus is composed of a couple or a single parent with unmarried child(ren); a household with one or more family nuclei is considered as a nuclear household.

There were 146,341 nuclear households, accounting for 77.5% of the total. The majority (68,885) were composed of a couple and unmarried child(ren), but its proportion in the total households decreased by 1.7 percentage points from 2011 to 36.5%. As married child(ren) living with parents became more common, significant increase was observed in households composed of a father and/or mother, and their unmarried child(ren) and parents, up by 36.4% from five years ago to 13,161. Other types of nuclear households (including skipped generation households, and households of a couple with married and unmarried child(ren)) totalled 15,535, up by 11.4%.

A no nuclear household is a household composed of two or more members, e.g. brothers or friends, living together without forming a family nucleus. There were 13,821 no nuclear households, accounting for 7.3% of the total, down by 0.8 percentage points from five years ago.

One-person households totalled 28,561, comprising 15.1% of the total; one-person households of elderly aged 65 and above increased by 37.6% from five years ago to 6,977.

2.3 Monthly Household Employment Earnings

Median monthly employment earnings of households increased by 43.5% from MOP23,700 in 2011 to MOP34,000. Average number of employed persons per household was 1.77, down by 0.1.

Analysed by number of employed persons per household, households with 2 working members predominated, taking up 33.6% of the total; households with no working member constituted 13.4%, up by 2.2 percentage points. Monthly household employment earnings went up along with an increase in the number of working members in the household. Median monthly employment earnings of households with one working member were MOP18,000, and the earnings of those with 5 or more working members were MOP59,000, up by 46.9% and 25.5% from 2011. Moreover, median monthly employment earnings of households with 2 working members had the highest growth of 48.2% from five years ago, at MOP37,000.

Analysed by statistical district, median monthly employment earnings of households in Pac On & Taipa Grande were the highest, at MOP69,000; meanwhile, the earnings in the Coloane Island were just MOP24,000 as 24.8% of the households in this district had no working member, which was higher than the corresponding proportions in the other districts.

14. Median monthly employment earnings of households

	2011			2016			Change of Median earnings (%)

2.4 Households Possessing Motor Vehicles

Number of households possessing motor vehicles (motorcycles or automobiles) continued to increase, up by 13.1% over 2011 to 105,993, which accounted for 56.2% of the land-based households. Analysed by type of motor vehicle, number of households possessing both motorcycles and automobiles totalled 37,585, a significant increase of 27.3% from five years ago; meanwhile, those with only automobiles rose by 19.6% to 28,680, and those with only motorcycles dropped by 1.3% to 39,728.

In addition, households possessing multiple motor vehicles became more common. There were 21,212 households owning three or more motor vehicles, up notably by 28.9% from five years ago. Meanwhile, households with one motor vehicle increased by 6.8% to 49,824, and its proportion in the total households possessing motor vehicles dropped by 2.7 percentage points from five years ago.

The ratio of motor vehicles to households stood at 59 motorcycles and 44 automobiles per 100 households, an increase of 2 motorcycles and 5 automobiles respectively compared with 2011.

15. Households possessing motor vehicles

	2011		2016		Change (%)
	No.	Structure (%)	No.	Structure (%)	
Total	170,535	100.0	188,564	100.0	10.6
Without motor vehicle	76,786	45.0	82,571	43.8	7.5

19

As compared with 2011, the proportion of households living in Taipa Island that possessed motor vehicles increased by 5.9 percentage points to 70.2%, while that in Coloane Island dropped substantially by 23.7 percentage points to 42.2% on account of an increase in households living in the Seac Pai Van public housing, as well as an expansion of public transport services for passengers going to and from Coloane Island. Meanwhile, 54.7% of the households living in the Macao Peninsula possessed motor vehicles, up by 1.3 percentage points. Analysed by type of motor vehicle, 91.6% of the households possessing motor vehicles in Taipa Island owned automobiles, considerably higher than the proportions of those in the Macao Peninsula (55.4%) and Coloane Island (72.6%).

Chart 12 - Households living in the Macao Peninsula and Islands that possessed motor vehicles
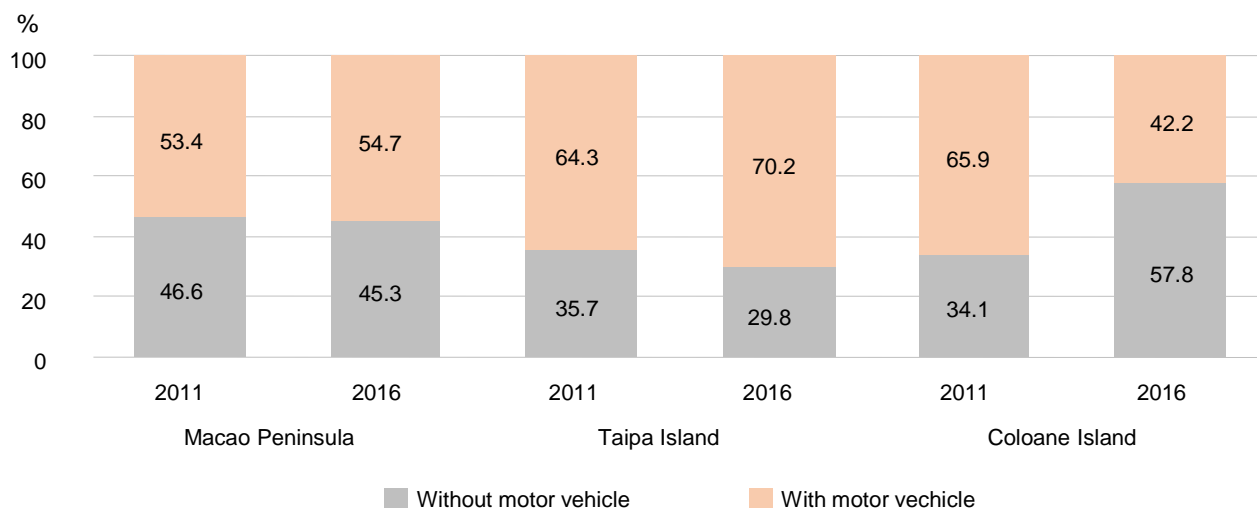

Total number of household-owned automobiles was 83,747. Due to an increase in supply of public car-park spaces, the proportion of automobiles parked in public car parks at night (10,486) increased by 3.7 percentage points from 2011 to 12.5%, while the proportion of automobiles parked in private car parks (62,045) decreased by 2.0 percentage points to 74.1%. On the other hand, number of household-owned motorcycles totalled 110,754, of which 66.6% were parked on the street, down by 4.7 percentage points from five years ago.

3. Housing

3.1 Housing Characteristics

Land-based households totalled 188,564, of which 187,618 lived in residential units, and 946 lived in temporary units or other types of accommodation. The average number of households per housing unit was 1.02, a slight increase of 0.01 compared with 2011.

Among the households living in residential units, 22,096 lived in economic housing and 12,223 in social housing, up by 34.2% and 108.8% respectively from five years ago, altogether making up 18.3% of the total households. Households living in private housing totalled 153,299, accounting for 81.7% of the total, including 8,573 households living in economic housing units of which ownership had been transferred. The average household size of private housing was 3.13 persons, higher than the averages for economic housing (3.00) and social housing (2.30).

Analysed by year of building completion, the majority of households lived in units completed between 1990-1999, accounting for 43.5% of the total, followed by those living in units completed between 1980-1989, at 23.7%. Meanwhile, 24,994 households (13.3%) lived in units completed in or after 2010, and most of them were households in public housing.

16. Households by year of building completion

	2011		2016		Change (%)
	No.	Structure (%)	No.	Structure (%)	
Total	168,937	100.0	187,618	100.0	11.1
Before 1980	22,376	13.2	20,840	11.1	-6.9
1980-1989	45,122	26.7	44,536	23.7	-1.3
1990-1999	81,716	48.4	81,542	43.5	-0.2
2000-2009	16,654	9.9	15,706	8.4	-5.7
2010 and after	3,069	1.8	24,994	13.3	714.4

Chart 13 - Household by type of housing and year of building completion
Analysed by usable area of residential unit, the majority (44.8%) of households lived in residential units with a usable area of 40-59.9 square metres, down by 1.0 percentage point from 2011. On the other hand, 16.4% of the households lived in units with a usable area less than 40 square metres, up by 1.7 percentage points. Per capita living space stood at 20.0 square metres, lower than that in 2011 (20.1 square metres).

3.2 Tenure of Residential Unit

Households living in owner-occupied units (property belonging to member(s) of the household) totalled 124,126, accounting for 66.2% of the total, down by 4.6 percentage points from 2011. The proportion of households living in their own private housing units dropped noticeably by 6.4 percentage points from five years ago to 56.2%, while the proportion of those living in privately-owned economic housing rose by 1.9 percentage points to 10.0%. Analysed by age group of the owner-occupiers, the majority (42.5%) were aged 55 and above, and 13.3% were aged 34 and below. The average age was 51.6.

Due to an increase in supply of social housing and a substantial rise in the number of non-resident workers, the proportion of tenant households climbed by 1.3 percentage points from 2011 to 25.8%, at 48,481. There were 2,290 households living in residential units provided by the employer, with its proportion falling slightly by 0.2 percentage points from five years ago to 1.2%. Meanwhile, households living in other types of units (such as rent-free units) totalled 12,721, up significantly by 124.0%.

17. Households by tenure of residential unit

	2011		2016		Difference (p.p.)
	No.	Structure (%)	No.	Structure (%)	
Total	168,937	100.0	187,618	100.0	-
Owner-occupied units	119,578	70.8	124,126	66.2	-4.6
Economic housing	13,750	8.1	18,765	10.0	1.9
Private housing	105,828	62.6	105,361	56.2	-6.4
Rented units	41,376	24.5	48,481	25.8	1.3
Social housing	5,855	3.5	12,208	6.5	3.0
Employer-provided	2,303	1.4	2,290	1.2	-0.2
Others	5,680	3.4	12,721	6.8	3.4

Analysed by statistical district, the proportion of households living in owner-occupied units was the highest in Guia, at 76.1%. On the other hand, the proportions of households in owner-occupied units in Coloane Island and Ilha Verde were only 41.0% and 53.2% respectively due to more households living in social housing in these districts.

3.3 Mortgage Payment and Rent of Residential Unit

Among the households living in owner-occupied units, 82,919 were mortgage free, representing 66.8%, down by 5.6 percentage points compared with 2011. Meanwhile, households who had to pay mortgage increased by 24.9% to 41,207, accounting for 33.2%. Moreover, mortgage payments of households showed an increase. Median monthly mortgage payment of households went up by 67.0% from MOP5,390 five years ago to MOP9,000. Analysed by the amount of mortgage payment, 24.2% of the households paid MOP10,000 – MOP14,999 per month, and 20.0% paid less than MOP5,000 per month.

Chart 14 - Distribution of households by monthly mortgage payment
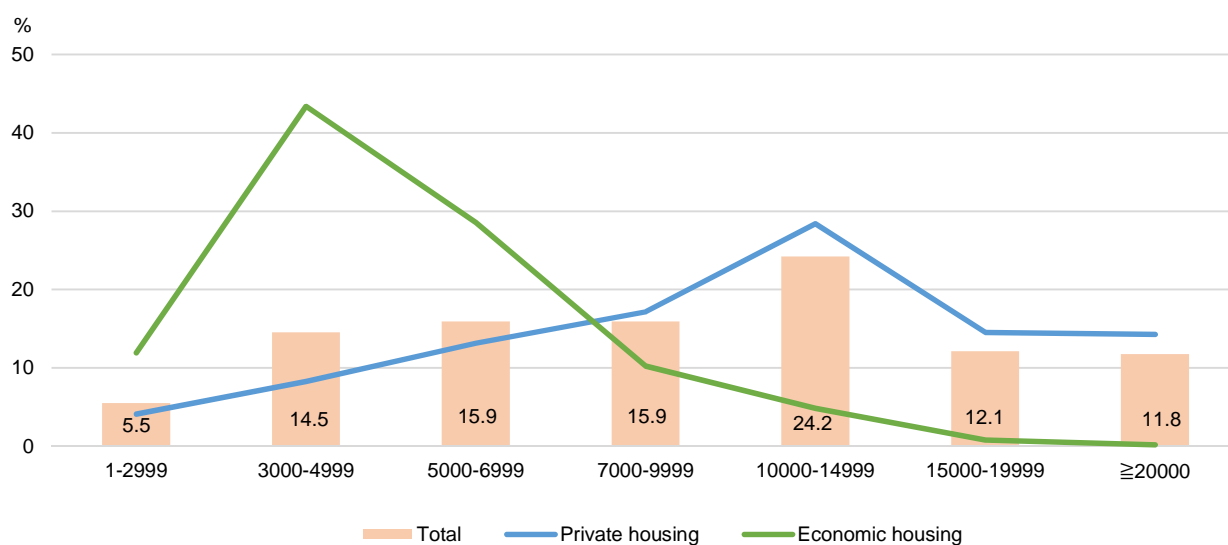

Average monthly mortgage payment of households was MOP11,054; the average payment of households in private housing was MOP12,363 and that for economic housing was MOP5,013. Analysed by statistical district, Pac On & Taipa Grande had the highest average mortgage payment of MOP43,537, while Coloane Island had the lowest average of MOP6,199.

As regards rent payment, median monthly rent payment of households doubled compared with 2011, at MOP6,489. Most of the households (28.9%) paid MOP5,000 – MOP6,999 per month, followed by MOP7,000 – MOP9,999 per month (24.1%). Analysed by statistical district, Pac On & Taipa Grande had the highest average rent payment of MOP18,724, while Ilha Verde had the lowest average of MOP4,160.

Explanatory Notes

Objectives

The Statistics and Census Service (DSEC), in line with international practice, conducts a population by-census in between two population censuses, to update the population statistics of Macao, and to track changes in the population, including population size, age structure, gender distribution, educational attainment, economic activity status, etc. The information collected serves as benchmark data for revising population estimates for past years and preparing population projections for future years. Besides, detailed demographic, social and economic characteristics are important reference to the Government in policy formulation, as well as to academic institutions in research studies and to private enterprises in planning of business strategies. Since 1996, Macao has conducted 3 rounds of population by-censuses.

Statistical coverage

Sampling method was adopted in the 2016 Population By-census to select 29,421 housing units in Macao for enumeration, and the unit of observation was individuals residing in these units. In order to obtain accurate inferences on the demographic characteristics of different population groups, besides general households, collective living quarters such as staff quarters of enterprises with more than 10 non-resident workers, school dormitories, as well as vessels berthed in the maritime area administered by the Macao SAR and all wooden sheds in Macao are fully enumerated, so as to enhance the quality of statistical data.

Data collection

The 2016 Population By-census was conducted over a period of 15 days, from 7 to 21 August 2016. The census reference moment, which is the reference time-point that data collected shall relate to, was fixed at 3 a.m. on 7 August 2016. Data collection of the marine population was carried out from 13 to 20 May, taking advantage of the fishing moratorium period.

Population by-census is a large household sample survey that requires a substantial amount of manpower. As such, 844 post-secondary students were recruited to assist in the survey. As the selected housing units were spread all over Macao, five work stations in the Macao Peninsula, and one in Taipa Island and another in Coloane Island were established for the convenience of enumerators to visit the households for data collection.

The 2016 Population By-census optimised the use of information technology to improve work efficiency and data quality. All enumerators used phone-tablets to record the data collected from households during face-to-face interview, and this allowed immediate logical validation of data to reduce the need to visit the households again. In addition, self-administered electronic questionnaire was first introduced in the 2016 Population By-census, with which households may provide information online or through the DSEC Mobile APP.

With the development of the society and in response to the needs of data users, the content of the 2016 Population By-census questionnaire was adjusted accordingly. Questions concerning the changing of jobs, the self-care ability in daily lives of people aged 60 and above, and professional certification, etc., were included. On the other hand, data about the disabled population are available in the existing Disability Assessment and Subsidy Inquiry System, and therefore these questions were no longer included in the 2016 Population By-census.

Statistical confidentiality

Regarding statistical confidentiality and privacy of personal data, DSEC strictly abides by the Dispatch 242/GM/99 that stipulates requirements for the collection and processing of personal data gathered in the 2016 Population By-census. All information obtained thereby are solely used for statistical purposes and disseminated in aggregate form that will not identify any individual. Staff involved in the operation were required to sign a declaration of statistical confidentiality and to abide by the confidentiality obligation. Offenders of statistical confidentiality are subject to legal liability.

Applicability of principal characteristics

Due to the varying characteristics of different population groups, some characteristics are only applicable to the specified population group, as follows:

Characteristics	Applicable population group
Place of previous residence, Length of Residence in Macao	Land-based population born outside Macao
Educational attainment, Language skills	Population aged 3 and above
School attendance	Land-based population aged 3 and above
Migration flows	Land-based population aged 5 and above
Literacy rate	Population aged 15 and above
Marital status, Economic activity status	Population aged 16 and above
Possession of motor vehicle, Tenure of residential unit, Rent/mortgage, Housing characteristics	Land-based households

Methodology

Sampling method

Stratified sampling method was adopted in the 2016 Population By-census with several strata, namely statistical districts, high-rise and low-rise building, electricity consumption of housing unit, and type of housing. Five random starts were used to minimise the sampling error, i.e. samples were composed of five equal sub-samples. Disproportionate sampling was applied in the sample design, where different sampling fractions were used according to the different characteristics of the strata. Overall, the sampling fraction is approximately one-seventh of the population.

Statistical inference

Formula for statistical inference is given as follows:

$$\hat{Y} = \sum_{h} \hat{Y}_h = \sum_{h} \frac{N_h}{n_h} \times \sum_{i=1}^{n_h} y_{hi}$$

where:

N_h - Total number of residential units in *h* stratum

n_h - Number of selected residential units in *h* stratum

y_{hi} - Number of people with *Y* characteristics in the *i*-th selected residential unit in *h* stratum

$\hat{Y}_h$ - Estimate of population with *Y* characteristics in the *h* stratum

$\hat{Y}$ - Estimate of population with *Y* characteristics

The above formula is applicable to the estimate of household and housing unit characteristics.

Response rate

A sample of 29,421 housing units was selected in the 2016 Population By-census. The overall response rate reached 90.7%, of which 16.9% submitted information through the e-questionnaire system.

Quality control

Potential recruits of the 2016 Population By-census were required to attend a training course of no less than 18 hours, after passing an online test and an interview. Course hours vary depending on job position. Suitable staff were selected according to their performance and assessment results in the training course, to ensure that they would complete the data collection process in line with the procedures prescribed.

For quality assurance, data collected had to pass through rigorous logical validation and processing procedures. Data collected by enumerators using phone-tablets would undergo immediate logical check. Meanwhile, data submitted via e-questionnaire would also undergo logical validation and further verification of data would be done by phone. Experienced coding staff were assigned to check information in relation to industry, occupation, academic discipline, etc. When in doubt, the staff would return the questionnaires to the enumerators who would follow up the cases by re-visiting the households or by phone. During the data collection period, random sampling method was applied to select completed cases for quality check by the team leader who would visit the households so as to ensure the quality of data collected. On the other hand, for uninhabited or vacant units, etc., special team would re-visit the units for confirmation.

Upon conclusion of data collection, a ten-day Post Enumeration Survey (PES) was carried out from 2 to 11 September 2016. About 660 households were selected from the completed cases for another interview to evaluate the quality of data collected by comparing the information of the questionnaires. Results of the PES indicated that data quality of the 2016 Population By-census complied with international standards.

Standard error of principal characteristics of Population and Households

Characteristics	Sample estimation	Standard deviation	Coefficient of variation (%)
Place of birth

Glossary

■ **Age**

Number of complete years an individual has lived since birth until the reference moment.

■ **Ageing ratio**

Percentage share of the elderly population aged 65 and above to the youth population aged 14 and below.

■ **Average age at first marriage**

Average length of single life expressed in years among individuals who marry before age 50.

■ **Collective housing unit**

Managed by specific institution or entity that engages in provision of accommodation or arrangement for living to certain population group. It includes:

- Hotels and similar establishments

- Institutions or infirmaries

- Staff quarters

- Other collective housing units

■ **Economic activity status**

Characteristics of individuals' participation in economic activity. The population can be divided into the economically active population and the economically inactive population.

■ **Economically active population**

Individuals aged 16 and above who are available to participate in the production of goods and/or services during the reference period. It comprises employed population and unemployed population.

■ **Economically inactive population**

Individuals who are not considered as employed or unemployed during the reference period, e.g. those who have not worked because of schooling, housework, retirement, sickness, etc., and have not sought work during the last 30 days.

■ **Educational attainment**

The highest level of education an individual successfully completed. "Primary education" refers to completion of grade six of primary education; those who fail to complete grade six are considered as "Primary education incomplete".

■ **Elderly dependency ratio**

Percentage share of the elderly population aged 65 and above to the adult population aged 15-64.

■ **Employed population**

Individuals aged 16 and above who work for pay, profits or family gains for at least 1 hour during the reference period. It also includes employees who are absent from work but maintain formal job attachment to employer, as well as company owners or shareholders who are temporarily away from work because of particular reason.

■ **Employment earnings**

For employees, it refers to the working income received; For employers and self-employed persons, it equals total value of production minus production expenses and depreciation of assets.

■ **Ethnicity**

Determined by blood relationship formed naturally by birth.

■ **Family nucleus**

Composed by two or more household members who are related by blood, marriage or adoption. Family nucleus comprises:

- A couple

- A couple with unmarried child(ren)

- A single parent with unmarried child(ren)

■ **Formal education**

Systematic curriculum, covering pre-primary education to tertiary education, organised mainly for children and young people.

■ **Gender ratio**

Number of males per 100 females.

■ **Household**

Individuals living together and make common provision for food or other essentials for living. Members of a household may not be related; an individual living alone is also considered as a household.

■ **Household composition**

Derived from the number of family nuclei and the relationship among the household members. It comprises:

- One-person household

- Nuclear family

- No nuclear family

■ **Household head**

An individual aged 16 or above who is acknowledged by the other member(s) as representative of the household.

■ **Industry**

Main economic activity engaged by an individual or enterprise during the reference period.

■ **Labour force participation rate**

Percentage share of labour force to the population aged 16 and above.

■ **Length of residence in Macao**

Number of complete years since an individual has established his or her usual residence in Macao. Any period of continuous absence from Macao for six months or more has to be deducted in reckoning the period.

■ **Literacy rate**

Percentage share of individuals aged 15 and above who are able to read and write, with understanding, simple statements on their everyday life.

■ **Marital status**

Status of an individual with respect of the law on marriage or customs of the country or territory.

In order to eliminate the influence arising from differences in age-gender structure of population, the distribution of marital status in this report is compiled using the age-gender structure of the 2016 Population By-census as the standard, i.e. the distribution of marital status in 2011 has been re-compiled, enabling direct comparison of standardised data to measure changes.

■ **Mobile population**

Individuals staying in Macao for at least one month but less than three months during the six months before or after the reference moment.

■ **Mortgage payment**

The amount paid by owner or household member to the bank or other financial institutions, as repayment of the loan on mortgage of the residential unit.

■ **Nationality**

Status of being a national of a country.

■ **Occupation**

Tasks or duties undertaken by an individual during the reference period.

■ **Overall dependency ratio**

Percentage share of the youth population and the elderly population to the adult population aged 15-64.

■ **Owner-occupied unit**

Residential unit owned by the household member(s).

■ **Place of previous residence**

Country or territory outside Macao where an individual had lived for at least 6 months before making Macao as the place of usual residence.

■ **Place of usual residence**

Place where an individual usually lived during the reference period. If an individual stayed mostly in Macao during the 6 months before or after the reference moment, his/her place of usual residence was Macao; otherwise, it would be of other country or territory**.**

■ **Professional certification**

The attainment of professional designation or qualification of occupational skills from professional bodies, occupational skill testing authority or government, etc., through systematic training, skill evaluation, testing, examination, etc., to prove a person to be qualified to engage in certain occupation or execute certain task with the required professional skill.

■ **Relationship to household head**

Relationship of the household head and household members determined by blood relation, marriage, adoption, etc.

■ **Rent**

The amount paid by a household for renting a residential unit.

■ **Residential unit**

Building unit designated for habitation.

■ **School attendance**

Receiving formal education in an educational institution by an individual aged 3 and above.

■ **Self-care Ability in Daily Life**

Ability to eat, bath, dress and perform other activities of daily living on one's own without assistance.

■ **Status in employment**

Status of an employed person engaging in an economic activity during the reference period, which can be classified into:

- Employer

- Self-employed

- Employee

- Unpaid family worker

■ **Temporary housing unit**

Unit in informal building used for habitation, e.g. wooden shed, metal shed, etc.

■ **Tenure of residential unit**

Arrangement or form of occupancy of a housing unit. It consists of:

- Owner-occupied unit

- Rented unit

- Employer-provided

- Others

■ **Total population**

Sum of the usual population and mobile population.

■ **Type of housing**

It consists of private housing, social housing and economic housing. Ownership of economic housing that has been transferred is considered as private housing.

■ **Unemployed population**

Individuals aged 16 and above who do not have a job or formal job attachment during the reference period, are available to work for pay or to start own business, and have sought work during the last 30 days**.**

■ **Usual language**

The language an individual mostly used at home.

■ **Usual population**

Individuals staying in Macao for at least three months during the six months before or after the reference moment.

■ **Youth dependency ratio**

Percentage share of the youth population aged 14 and below to the elderly population aged 15-64.
